

DIAMOND PACKAGING

Diamond Packaging has purchased wind-generated Renewable Energy Certificates to offset their electricity usage.

This commitment will allow 7,690,000 kWh of wind energy per year to enter into the national electricity grid annually from 10/1/2020 until 9/30/2023.

This purchase makes a difference for the environment and promotes our nation's energy independence. The annual sum of greenhouse gas emissions is the Carbon Dioxide equivalent to 5,437 metric tons. The estimated annual environmental benefit is equivalent to the carbon sequestered by 7,101 acres of trees or by removing 1,175 passenger vehicles from the road.

The Renewable Energy Certificates are supplied by leading renewable energy marketer and developer Community Energy.
